

# MICROPARKS Messaging

2C Mississippi is developing a system of micro parks on several vacant properties the Colonial Heights neighborhood. The parks will have rain gardens and other nature-based solutions to flooding. Based on our research, we expect the microparks to have multiple benefits among them:

1. transformation of vacant lots into aesthetically pleasing spaces
2. enhanced property values for homeowners in the community
3. potential for new residential development
4. a public space for the community to enjoy

The Jackson Community Design Center, JCDC, will be in providing potential design concepts and the intent of the meeting is to hear what the community feels about the development, it's potential uses and how they can participate in future meetings and interviews.

Examples of Microparks

Funding for this project is provided by the Inflation Reduction Act through the USDA Forest Service, Urban Community Forestry Program and Conrad N. Hilton Foundation.
